WOOD & WASHI

Follo

Follo – The Folded Evolution of Rollo.

This Roman blind offers a concise and contemporary window treatment, combining the softness of Woven Washi with architectural precision. Its structured folds provide a lightweight solution, making it a versatile element that integrates seamlessly into both classical and minimalist design schemes.

Designed for those who value craftsmanship and subtlety, each Follo blind is individually made to measure, ensuring a seamless fit and a flawless finish. The gentle folds and translucent quality of Woven Washi offer a serene interplay of privacy and light.

Woven Washi fabrics reveal delicate textures and subtle patterns that play with light in ever-changing ways. Their natural hues, rooted in the tradition of Japanese washi paper, gently expand the sense of space while enveloping the interior with warmth, serenity, and timeless elegance.

Horizontal ribs provide a refined way to articulate and separate segments, drawing on Japanese principles of modular spatial organization. Their linear rhythm adds structure and balance, creating a subtle dialogue between tradition and modern interior design.

To ensure maximum comfort and adaptability, Wood & Washi solutions are available with both manual and automated control. Follo can be adjusted effortlessly—either by remote control or via a smartphone app—offering seamless integration into any modern lifestyle.

Profiles & ribs

Bottom profile & Ribs

Distinctive with character. The high-quality ribs and profiles are design and functional elements at the same time. They precisely segment the selected materials and provide individual screens as well as the overall solution with rhythm and structure.

- Ribs are available in Aluminium, Aluminium Colors and Aluminium Wood. The ribs can be painted in a RAL color on request.
- The Wood & Washi Follo top rib is 25 mm and applied to the visible side.
- The Wood & Washi Follo bottom rib is 25 mm and applied to both sides.
- The Follo intermediate ribs are 10 mm high and applied to both sides.

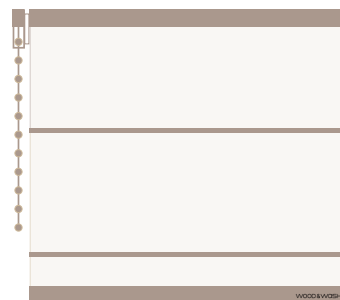

Deviations are possible in consultation. In projects featuring multiple Wood & Washi solutions, the ribs of Rollo, Panel, Banner and Flow can often be configured to match Follo's segment height.

04

Segments

Segments

Horizontal ribs provide a refined way to articulate and separate segments, drawing on Japanese principles of modular spatial organization. Their linear rhythm adds structure and balance, creating a subtle dialogue between tradition and modern interior design.

Number and height of the segments

The number and height of the segments depend on the desired system height.

Intermediate segments

The height of the intermediate segments are all the same at a minimum of 27 cm and a maximum of 44 cm.

Top segment

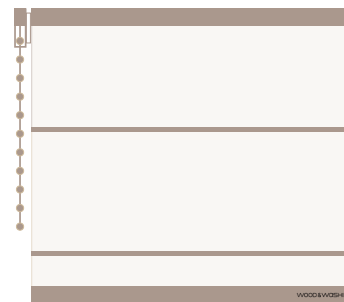

Only for motorized versions the top segment will turn out 50 mm higher to cover the mounting case. With manual Follo the top segment will be the same as the intermediates.

Bottom segment

In all versions the bottom segment will be produced at approximately half the height of the intermediate segments.

05

Installation options

Installation of Follo

Follo is a versatile fold-up and -down system designed to complement any type of window. Light and elegant, it offers a sophisticated alternative to drapes and heavy curtains. Its key advantage lies in the flexibility of mounting options, ensuring seamless integration into any interior concept.

Mount and control

When operated manually, the control chain is available in bright chrome or nickel-tinted chrome.

Ceiling mount

Standard mount with great strength and flexibility. It meets modern interior design trends and allows to use Follo as efficiently as possible.

Wall mount

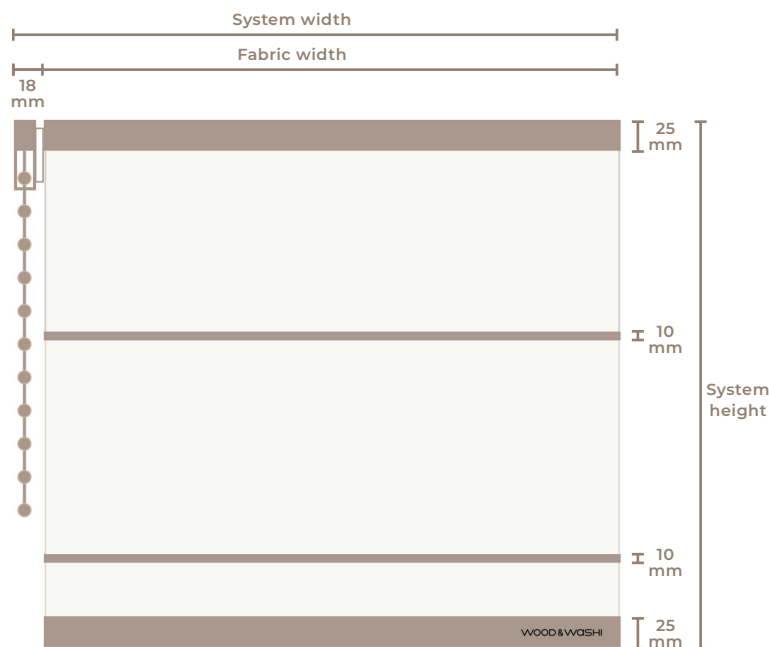

Wall mount allows to fit variously shaped windows and to fix Follo at an appropriate height.

Side-by-side

Since Follo is constructed top-down, adjacent units can be seamlessly connected to extend the system's effective width.

Dimensions Follo

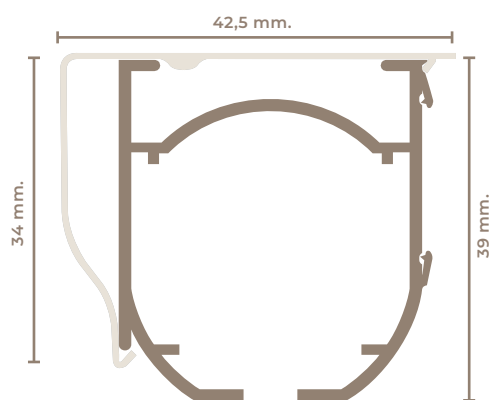

Mounting brackets Follo

Installing Follo is easy. Mount the standard, included brackets approximately 10 cm inward from the outside of the desired position. Distribute any additional supplied brackets over the space in between.

Push the Roman blind into the clamp at the top and tilt the profile into the bracket. You'll hear a distinct click, and Follo is ready to use.
