

WOOD & WASHI

Wood & Washi: A fusion of functionality and aesthetics.

By applying honest traditional materials in modern design, using high-end techniques, Wood & Washi provides tailor-made interior products with attention to the finest detail.

Modern Western production technologies are applied with materials created according to over 1,000 years old traditional Japanese craftsmanship.

Each and every systems has uniquely designed qualities that are unparalleled in the market. Wood & Washi configures every product, taking into account the wishes of each client and their design project.

Thanks to exclusive design and functionality, the products naturally complement any interior by providing a sense of completion, coziness and aesthetics.

Wood & Washi specialists are prepared to find the most suitable solution for any interior design, regardless of the space type and complexity of the project.

A close-up photograph showing two hands resting on a dark, textured surface. To the left, a white ruler is visible, showing measurements in centimeters. The background is dark and out of focus.

Functional systems for modern interiors.

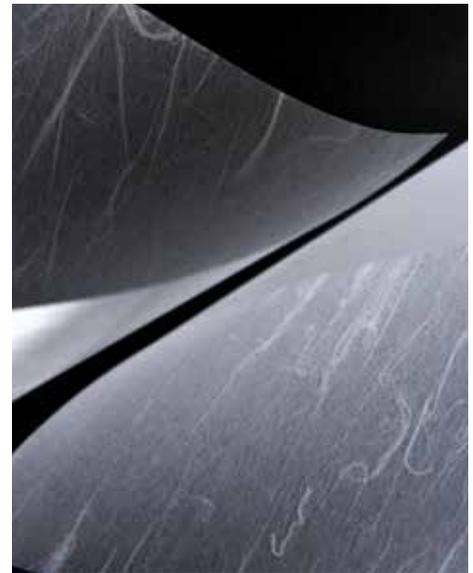

Implementing Wood & Washi systems is one of the easiest and most effective ways to organize space. Fit for the design of standard and non-standard windows, layout of the room and the creation of visual harmony.

Each Wood & Washi system is custom made and unparalleled in the market. The design is based on the parameters of the window, the features and design of the room and the interior style.

The systems are based on woven and laminated Washi paper that is made from wood fibers using old Japanese craft technology. All products are fitted with anodized aluminum ribs using natural shades and inlays.

The individual production allows endless combinations of colors and textures, using different perforation setups to create original light effects and manage decorative separation of sunrays.

Wood & Washi is ready for every window-decoration desire, even the most bold ideas.

Wood

Ribs are characteristic of Wood & Washi products.

All products are equipped with horizontal profiles that ensure optimal weight balance and enhance the visual aesthetics.

The ribs are made of high-quality anodized aluminum and executed in natural tones or provided with wood veneer inlay.

Screens can be divided into segments with ribs; evenly or completely configured to order. This way the products adapt even better to the design of the environment.

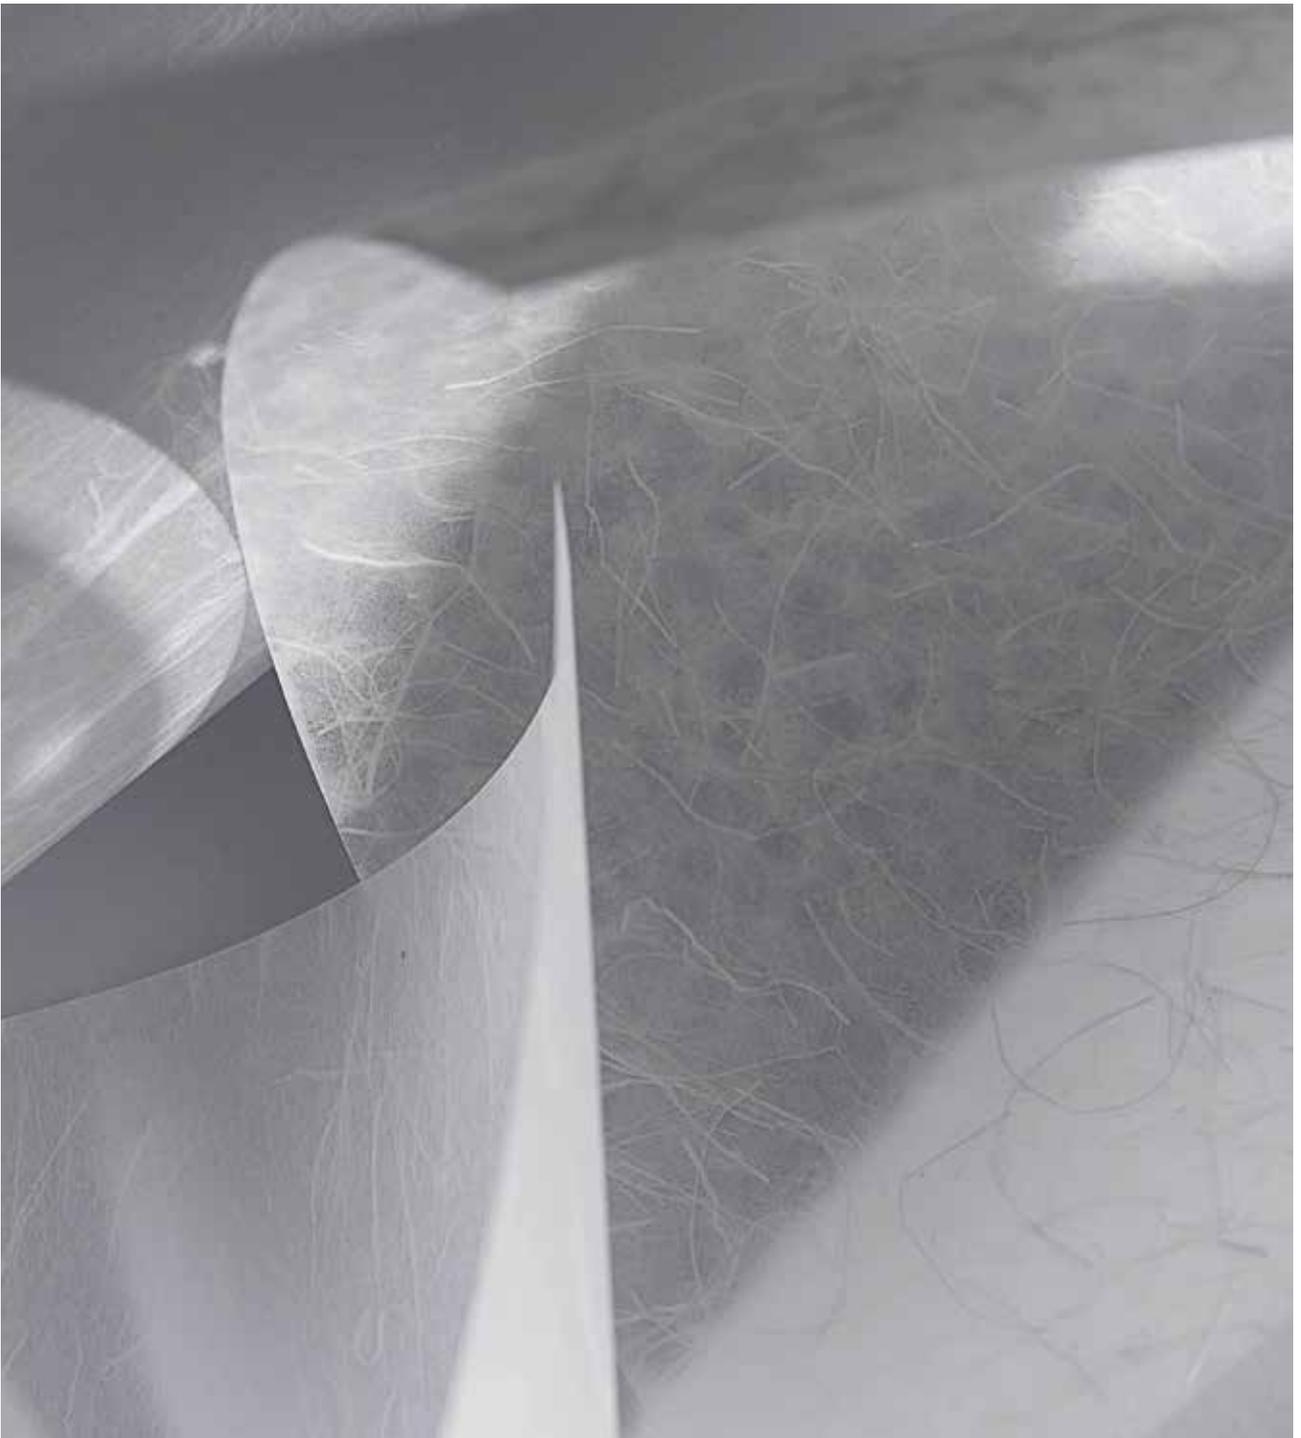

Washi

Washi literally means «Japanese paper».

Washi provides natural light with high lightfastness.

There are translucent and semi-translucent options available in a wide range of colors and patterns.

Textures are available in different grades of translucency: from very translucent to completely blackout.

Besides neutral solid colors, the collections include beautiful natural colors and patterns.
